# Using the VTW Template to display Win Probabilities Nub

## 1. Click on the VTW Template Win Prob Tab.

## 2. Click on the League Dropdown to select your league.

3. A list of games for the next two days should populate to the right of the league dropdown.

4. Click on a line in the games list to bring up the NU_WinProb template with Win Probability data for the chosen matchup.

5. The data updates on the Sportradar update every 10 seconds, to refresh the data in the preview window press the fetch data button or simply click the line in the game list again.

6. If you want to update the win probability graphic on air simply fetch the data again and then press the refresh data onair button (this button is triggering the Page:Update viz command which simply updates the data on the engine without animating out the graphic.
